

Appendix H: Existing Conditions Traffic Operations

MEMORANDUM

Date: February 10, 2017
To: Brent Pearse, VTA
From: Carrie Modi, Matt Haynes, and Vicki Caudullo
Subject: **Draft Intersection Traffic Operations Memorandum**

OK16-0122

This memorandum presents the results of our draft traffic operations assessment for the Story-Keyes Corridor Complete Streets Study (the Study). This memorandum summarizes existing conditions of intersection traffic operations on the corridor.

OVERVIEW

The Story-Keyes Complete Streets corridor begins at Willow Street east of the Guadalupe Freeway and continues east along Graham Avenue, Goodyear Street and Keyes Street, terminating at Capitol Expressway. For the purposes of the existing conditions analysis, 20 intersections along the corridor were analyzed. Intersection operations vary throughout the corridor and are summarized below. The purpose of this broader look at existing traffic operations is to identify potential constraints on the corridor. As alternatives are studied and evaluated in future phases of the Study, the traffic operations analysis will focus on the five highest priority locations.

ANALYSIS SCENARIOS

The operations of the study intersections were evaluated during the weekday morning (AM) peak hour and weekday evening (PM) peak hour in existing conditions.

ANALYSIS METHODS

The operations of roadway facilities are described with the term *level of service*. Level of Service (LOS) is a qualitative description of traffic flow based on factors such as speed, travel time, delay,

and freedom to maneuver. Six levels are defined from LOS A, the best operating conditions, to LOS F, the worst operating conditions. LOS E represents “at-capacity” operations. When traffic volumes exceed the intersection capacity, stop-and-go conditions result, and operations are designated as LOS F.

Local Analysis

Existing conditions are based on the City of San Jose citywide TRAFFIX 8.0 software program database, last updated August 13, 2015. The City's TRAFFIX model was used to calculate level of service with some additional inputs of traffic volumes from the City of San Jose.

Signalized Intersections

The method described in Chapter 16 of the 2000 *Highway Capacity Manual* (HCM) (Special report 209, Transportation Research Board) was used to prepare the level of service calculation for the study intersections. This level of service method, which is commonly used by the City of San Jose and VTA, analyzes a signalized intersection’s operation based on average control delay per vehicle. Control delay includes the initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. The average control delay for signalized intersections is calculated using TRAFFIX analysis software and is correlated to a LOS designation as shown in **Table 1**.

**TABLE 1: SIGNALIZED INTERSECTION LEVEL OF SERVICE DEFINITIONS
 USING AVERAGE CONTROL VEHICULAR DELAY**

Level of Service	Description	Average Control Delay Per Vehicle (Seconds)
A	Operations with very low delay occurring with favorable progression and/or short cycle lengths.	≤ 10.0
B+ B B-	Operations with low delay occurring with good progression and/or short cycle lengths.	10.1 to 12.0 12.1 to 18.0 18.1 to 20.0
C+ C C-	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.1 to 23.0 23.1 to 32.0 32.1 to 35.0
D+ D D-	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, and high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.1 to 39.0 39.1 to 51.0 51.1 to 55.0
E+ E E-	Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences.	55.1 to 60.0 60.1 to 75.0 75.1 to 80.0
F	Operations with delays unacceptable to most drivers occurring due to over-saturation, poor progression, or very long cycle lengths.	> 80.0

EXISTING CONDITIONS

Existing intersection lane configurations, signal timings, and peak-hour turning movement volumes were used to calculate the levels of service for the key intersections during each peak hour. The results of the LOS analysis are presented in **Table 2**. **Appendix A** contains the corresponding calculation sheets.

TABLE 2: EXISTING INTERSECTION LEVELS OF SERVICE

	Intersection	Jurisdiction / CMP¹	LOS Threshold²	Peak Hour³	Delay⁴	LOS⁵
1	Vine Street / Willow Street	City of San Jose	D	AM PM	8.0 16.2	A B
2	Almaden Avenue / Willow Street	City of San Jose	D	AM PM	16.1 14.9	B B
3	First Street / Keyes Street	City of San Jose (CMP)	D	AM PM	27.1 28.9	C C
4	Keyes Street / Second Street	City of San Jose	D	AM PM	19.2 31.4	B- C
5	Keyes Street / Third Street	City of San Jose	D	AM PM	22.5 12.9	C+ B
6	Keyes Street / Seventh Street	City of San Jose	D	AM PM	34.3 36.7	C- D+
7	Keyes Street / Tenth Street	City of San Jose	D	AM PM	25.7 25.2	C C
8	Eleventh Street / Keyes Street	City of San Jose	D	AM PM	27.1 25.2	C C
9	Keyes Street / Senter Road	City of San Jose	D	AM PM	26.0 28.1	C C
10	Roberts Avenue / Story Road	City of San Jose	D	AM PM	18.5 22.1	B- C+
11	Lucretia Avenue / Story Road	City of San Jose	D	AM PM	29.9 32.4	C C-
12	McLaughlin Avenue / Story Road	City of San Jose	D	AM PM	40.4 45.2	D D
13	Felipe Avenue / Story Road	City of San Jose	D	AM PM	25.2 22.9	C C+
14	Knox Avenue / Story Road	City of San Jose	D	AM PM	25.2 25.0	C C
15	King Road / Story Road	City of San Jose	D	AM PM	50.9 55.9	D E+
16	Bal Harbor Way / Story Road	City of San Jose	D	AM PM	34.8 28.7	C- C
17	Hopkins Drive / Story Road	City of San Jose	D	AM PM	35.1 31.5	D+ C
18	Adrian Way / Story Road	City of San Jose	D	AM PM	24.2 27.4	C C

TABLE 2: EXISTING INTERSECTION LEVELS OF SERVICE

Intersection		Jurisdiction / CMP ¹	LOS Threshold ²	Peak Hour ³	Delay ⁴	LOS ⁵
19	Jackson Avenue / Story Road	City of San Jose	D	AM PM	27.8 32.6	C C-
20	Capitol Expressway / Story Road	County of Santa Clara and City of San Jose (CMP)	D/E	AM PM	56.6 52.7	E+ D-

Notes:

Bold text indicates intersection operates at unacceptable level of service.

1. Intersection jurisdiction and identification of CMP (Congestion Management Program) intersections.
2. Santa Clara County intersections in San Jose use an LOS E threshold.
3. AM = morning peak hour, PM = evening peak hour.
4. Whole intersection weighted average control delay expressed in seconds per vehicle calculated using methods described in the 2000 *Highway Capacity Manual*, with adjusted saturation flow rates to reflect Santa Clara County Conditions for signalized intersections.
5. LOS = Level of Service. LOS calculations conducted using the TRAFFIX analysis software packages, which apply the methods described in the 2000 *Highway Capacity Manual*.

Source: Fehr & Peers, 2016.

The results indicate that of the 20 studied intersections, only King Road/Story Road in the PM peak hour does not operate at the acceptable service level. All other intersections operate at acceptable service levels (LOS D or better for City of San Jose intersections and LOS E or better for regionally significant intersections (CCMP)) during the AM and PM peak hours.

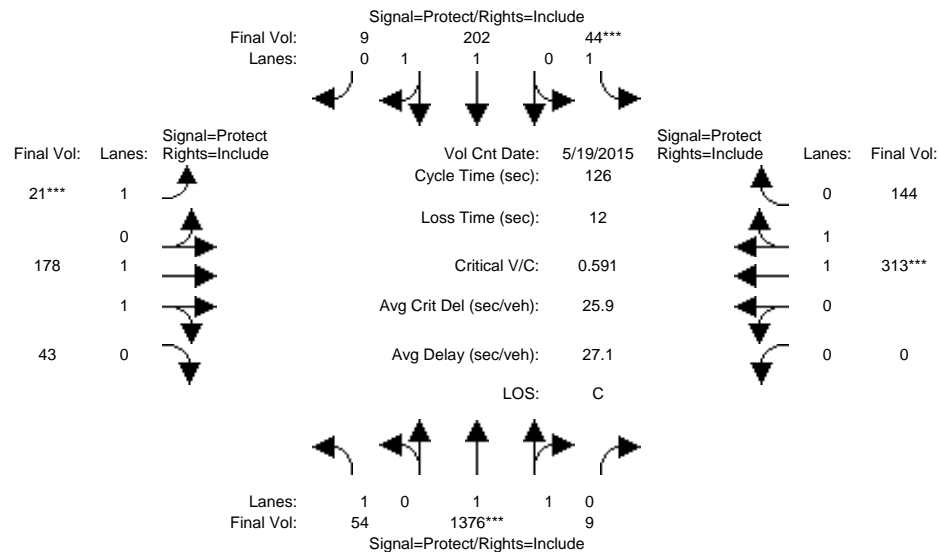

King Road/Story Road and Capitol Expressway/Story Road operate at the worst LOS of the 20 studied intersections, with LOS D and LOS E+ for King Road/Story Road, and LOS E+ and D for Capitol Expressway/Story Road AM and PM peak hours respectively.

These results suggest that many intersections along the corridor operate below their capacity under existing conditions. However, some intersections operate at or near designated LOS thresholds, and as a result design alternatives for the corridor will need to balance traffic operations performance against other project priorities and goals.
